Ekeeda - Applied Electronics and Instrumentation Engineering

BRANCH: APPLIED ELECTRONICS AND INSTRUMENTATION SEMESTER VII

Course No.	Name of Subject	Weekly load hrs L T D/P			Max. Sessional Marks	Exam Duration Hrs	Exam Max. Marks	Credits
08.701	Industrial Management (TA)	2	1	-	50	3	100	3
08.702	Robotics & Industrial Automation (A)	3	1	-	50	3	100	4
08.703	Discrete-Time Control Systems (A)	3	1	-	50	3	100	4
08.704	Process Dynamics & Control (A)	3	1	-	50	3	100	4
	Elective III (TA) or (A)	2	1	-	50	3	100	3
	Elective IV (TA) or (A)	2	1	-	50	3	100	3
08.707	Biomedical Signal Processing Lab (A)	-	-	3	50	3	100	3
08.708	Control system Lab (A)	-	-	3	50	3	100	3
08.709	Seminar (TA)	-	-	1	50	-	-	1
08.710	Project Design (TA)	-	1	-	50	-	-	1
	TOTAL	15	7	7	500		800	29
	TOTAL MARKS 1300			**TOTAL CREDITS 29**				

Note: 08.701 shall be handled by faculty of Mechanical Dept.

Elective III	
08.705	Real Time Operating Systems (TA)
08.715	Cryptography (TA)
08.725	Pattern Recognition (TA)
08.735	Optoelectronic Devices (TA)
08.745	Computer Vision (TA)
08.755	Biomedical Imaging Techniques (A)

Elective IV	
08.706	Mixed Signal Circuits Design (TA)
08.716	Embedded Systems (TA)
08.726	Intellectual Property Rights (TA)
08.736	MEMS (TA)
08.746	Low Power VLSI Design (TA)
08.756	Mechatronics (A)

From 1980 to 1986, an attempt was made to place arterial bypass grafts in all 35 patients who underwent bypass procedures for the relief of critical ischemia caused by arteriosclerosis obliterans and who had unsuitable distal arteries or below-the-knee popliteal vessels for placement of prosthetic grafts. Autogenous vein bypass was used in 32 of the 35 patients. Thirty-two of the 35 patients (91 per cent) had satisfactory results at a mean follow-up of 36 months, and the other three patients had grafts that failed to maintain adequate pressure distal to the bypass. There was one early death in a patient with non-healing ulcers who had a previous history of sepsis. Overall, 29 of the 35 patients (83 per cent) had improved significantly. There was one wound infection and two patients were lost to follow-up. The procedures were performed at a mean hospital stay of 13.8 days. Our results suggest that when technically feasible, infrainguinal autogenous vein bypass is a suitable alternative to prosthetic bypass in the treatment of severe lower extremity ischemia and can be performed with a high degree of success, a low risk of major complication, and minimal hospitalization.Development of a systems pharmacology-based approach for discovery and repurposing of potential antidepressant drugs. Systems pharmacology (SysPharm) has made a major contribution to the identification of novel disease biomarkers and treatment targets. However, SysPharm approaches have not been explored in the field of antidepressant development. Here, we propose that SysPharm approaches could be used for discovery and repurposing of new antidepressant treatments. We established a SysPharm workflow to elucidate the association between antidepressant drug-related targets, effects and diseases. The workflow was validated by three drug discovery studies (N = 3) and six published pharmacodynamic-based drug repur 82157476af
